AALBORG UNIVERSITY

STUDENT REPORT

Title:

Inverters and Charge Controllers

Theme:

Analog Instrumentation

Project Period:

Spring Semester 2017

Project Group:

B320b

Participant(s):

Daniel Frederik Busemann

Johannes Ari Lárusson Holm

Razvan-Vlad Bucur

Troels Ulstrup Klein

Supervisor(s):

Akbar Hussain

Torben Rosenørn

Copies: 1

Page Numbers: 11

Date of Completion:

April 26, 2017

Abstract:

This project is about charge controllers and inverters as they might be used in a solar power appliance.

Here is the abstract

The content of this report is freely available, but publication (with reference) may only be pursued due to agreement with the author.

Contents

Preface	ix
1 Introduction	1
1.1 Examples	1
1.2 How Does Sections, Subsections, and Subsections Look?	1
1.2.1 This is a Subsection	1

Chapter 1

Introduction

In this project we want to talk about inverters and charge controllers with the main focus of bettering our understanding of those. We chose those two components because they are commonly used together in solar power systems.

We expect the reader to have a basic understanding of batteries and solar panels, but will provide some information on those as well.

3

1.1 Examples

You can also have examples in your document such as in example 1.1.

Example 1.1 (An Example of an Example)

Here is an example with some math

$$0 = \exp(i\pi) + 1 . \tag{1.1}$$

You can adjust the colour and the line width in the `macros.tex` file.

1.2 How Does Sections, Subsections, and Subsections Look?

Well, like this

1.2.1 This is a Subsection

and this

This is a Subsubsection

and this.

A Paragraph You can also use paragraph titles which look like this.

A Subparagraph Moreover, you can also use subparagraph titles which look like this. They have a small indentation as opposed to the paragraph titles.

Is it possible to add a subsubparagraph?

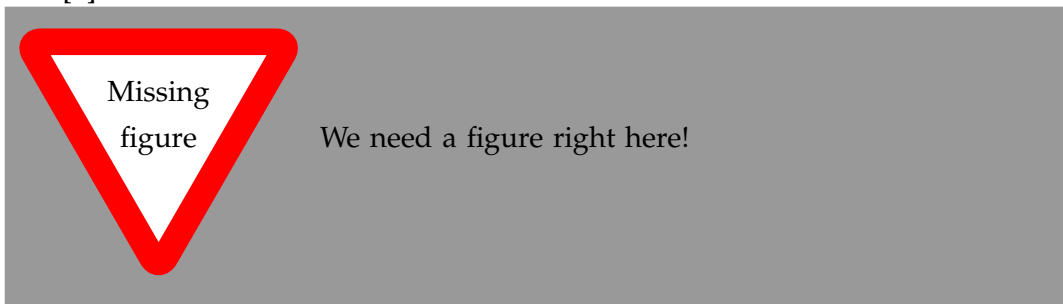

I think that a summary of this exciting chapter should be added.

Chapter 2

Chapter 2 name

Here is chapter 2. If you want to leearn more about $\text{\LaTeX}2_{\epsilon}$, have a look at [1], [3] and [2].

I think this word is misspelled

Chapter 3

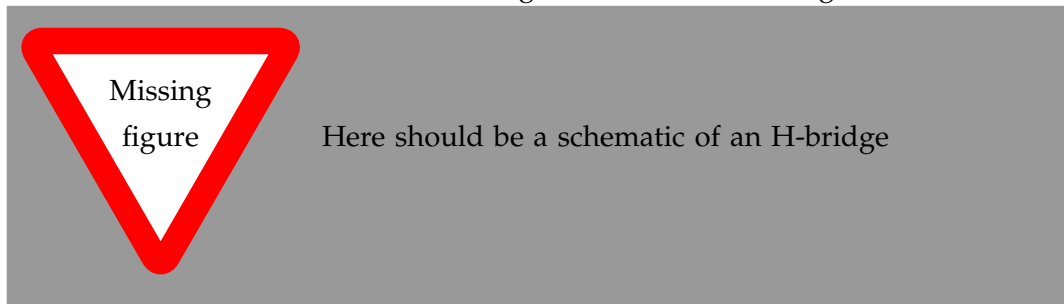

Inverter

3.1 Introduction

After looking at different schematics for the inverter we decided to have a closer look at the H-bridge model. We chose this model because it seemed to fit our knowledge level of electrical engineering while still giving us the opportunity to learn on it.

3.2 General Function

For a schematic representation of the H-bridge please see figure 3.2. The general idea is to periodically invert the current flowing through the AC Load. To achieve this the current has to flow either through 'A' and 'D' or through 'B' and 'C'.

The switches on either side of the load ('A'&'C' and 'B'&'D') are not allowed to be closed simultaneously, because this would result in short-circuiting the DC source.

To ensure that this is not happening we investigated switching 'AD' with the rising edge of a clock signal and 'BC' with the negative edge of the same clock.

We found out that, due to ?propagation/switching? time, there is a short overlap in timing, when all transistors would be conducting (as can be seen in figure 3.2.a)

Our next idea was to use two different signals for 'AD' and 'BC', such that the switching delay is taken into consideration. This can be seen in figure 3.2.b.

3.3 Formatting

You have to make two returns to have a new paragraph

This is normal text. **This is bold text!** *this is italics.* ***This is emphatic.***

This is underlined.

"This is in weird quotation marks."

“This is in proper quotation marks.”

‘And this is in single quotes.’

Chapter 4

Conclusion

In case you have questions, comments, suggestions or have found a bug, please do not hesitate to contact me. You can find my contact details below.
